TECHNICAL SKILLS

Specialization: Mobile App Development, Software Architecture, AI Orchestration, Harness Engineering

Frontend: React Native + Typescript

Backend: TypeScript, Python, Java Springboot

Infrastructure: Kafka, GraphQL, Docker, Kubernetes, AWS, GCP, Cloudflare, Firebase, MongoDB

Others: Game Design with Unity/Unreal, CI/CD pipelines

PROFESSIONAL EXPERIENCE

Hinge Health

Remote

Software Developer II (Full Stack - Mobile focus)

May 2023 – Present

- Acted as project DRI for multiple frontend and backend initiatives, overseeing end-to-end delivery within timeline and maintaining low defect rate with attention to details.
- Developed heuristics for real-time person pose detection by processing raw person joint features from the CV (computer vision) engine and built complex performance-aware animations for CV feedback based UX.
- Designed and led the backend implementation for a CV movement assessment feature across multiple micro-services, managing architectural design involving Kafka event dispatch timing and data ingestion.
- Spearheaded observability initiatives by designing custom Datadog latency and error dashboards; identified and mitigated a critical system incident on the first day of feature launch.
- Accelerated delivery efficiency by 6x through the optimization of TypeScript workflows and GitHub CI/CD actions.
- Leveraged Harness engineering and Claude-assisted development to accelerate sprint velocity and uphold high code quality standards.

Arctic Wolf

Remote

Software Developer Co-op (Backend)

Sept 2022 – Dec 2022

- Researched and developed Python integration of AWS DocumentDB into the backend ecosystem to allow schedulable and maintainable system backups.
- Designed data fetch and parsing logic for a cybersecurity knowledge base and enabled scalable deployment using AWS CloudFormation.

Enlighted Inc

Remote

IoT Software Developer Co-op

Jan 2022 – Apr 2022

- Implemented gateway/sensor network simulator to test packet transmission and central processing.
- Enabled mass deployment of customizable simulators with Docker + Kubernetes and cloud computing resources (EKS); achieved 90% resource utilization rate to minimized cost.

Martello Technology

Remote

Software Developer Co-op (Full Stack - Web focus)

Jan 2021 – Apr 2021

- Delivered user-facing features for a network monitoring SaaS webapp using Java Spring, PostgreSQL, and Node.js.
- Designed and automated backend tests using JUnit and Mockito, ensuring robust server-database communication.

PROJECTS

Demos available on [my website](#)

Pawnik Attack | *React Native, Game Design, Animation, AdMob*

2026

- A feature-rich mobile game demonstrating responsive and intuitive UX.
- Firebase integration for backend data storage.

Vibe Forecast | *React Native, AI Integration, In-App Purchase*

2026

- Cross-platform mobile app featuring AI Tarot and I Ching readings based on the Gemini API via Cloudflare proxy for secure, scalable LLM orchestration.
- Secure device-side storage and well-formed monetization strategy.

NeAR Me | *Unity, C#, Python, Java, MongoDB, Cloud Infrastructure*

2023

- Interactive AR mobile application featuring real-time location markers tailored to user interests.
- Backend recommendation system (KNN-based) using Python Flask and Java, containerized and deployed via Google Kubernetes Engine.
- Multi-level caching system to enable real-time recommendation.

MorphX | *Unreal Engine, C++, Game Design*

2024

- A 3D first-person escape room game utilizing C++ for custom physics and game state logic.

EDUCATION

University of Waterloo | Bachelor of Computer Engineering
Specialized in Artificial Intelligence and Management Science

May 2023

Certifications

- 2022 - AWS Certified Cloud Practitioner
- 2023 - Certified Kubernetes Application Developer (CKAD)
- 2024 - Certified Information Technology Specialist (CIPT)
